

Mission Spec Two Point Sling (M2P)

Fighting Mode

Under Strong Shoulder Carry

By placing your **Strong Side Arm** through the sling this carry position allows the Closed Cell Foam Pad to rest on the Users shoulder and help distribute the weight of the weapon.

When the weapon is moved onto the Users back it is facing **muzzle down** and is able to be **Rapid Cinched** from the front, securing the weapon (as tightly as desired) to his/her back. Release **Rapid Cinch** by pulling upward on the **Tension Lock**.

Storage Mode with Rapid Cinch

Fighting Mode

Over Strong Shoulder Reverse Carry

By reversing the **M2P** and putting the Closed Cell Foam Pad toward the barrel the User can move the weapon onto his/her back to have the weapon carried **muzzle up**.

Rapid Cinch is accomplished with the same motion as **Under Strong Shoulder Carry** (by pulling down on the **Rapid Cinch** Strap which will be located on the Users front when the weapon is to the rear. Release **Rapid Cinch** same as above.

Storage Mode with Rapid Cinch

Fighting Mode

Over Strong Shoulder Carry

This carry style will allow the weapon to be **Rapid Cinched** to the front of the User. When the weapon is needed it can be easily released with the **Tension Lock**. If there is no time the User can simply activate one of the two **Quick Detach** buckles on either end of the **Mission Spec M2P**.

This carry style works great for fast roping or other situations where the rifle will be needed quickly.

Storage Mode with Rapid Cinch

Rapid Cinch allows the User to secure the weapon as tightly as necessary to his/her body in order to accomplish other tasks (rendering aid, climbing, going *hands on*).

Mounting System
The included mounting hardware will attach to your AR-15 (or like) rifle with these 3 easy steps.
